

README file Instructions:

A README file is a text file which is usually distributed with the software project to provide a basic description of the project and information a user may need in order to compile or operate the program.

At a minimum, all files in the project (source code, Makefile, README file, etc) shall contain:

- Your name (and your partners name if a team project)
- Your class account username (and your partners if a team project)
- Class information (i.e. CS 570, Fall 2006)
- Assignment information (i.e. Assignment #1, Process Manager)
- Filename of this file (i.e. README)

At a minimum, the README file shall contain (in addition to the above):

- File manifest (name of all files included in this project)
- Compile instructions
- Operating instructions (include any/all command line options/arguments, required inputs, etc)
- List/description of novel/significant design decisions
- List/description of any extra features/algorithms/functionality you included which were not required
- List/description of all known deficiencies or bugs
- Lessons Learned
